

DIGITAL MARKETING – PROJECT 4

Social Media Analytics

Submitted By:

Maham Waseem

Batch:

2026

Internship:

Decode Labs – Digital Marketing

Introduction

In this project, I analyzed the performance of social media posts to understand which type of content gets better engagement. I used basic social media metrics to identify what worked well and what could be improved. This analysis helped me understand how businesses can make better decisions for future social media content.

What are Social Media Analytics?

Social media analytics is the process of measuring the performance of social media posts. It helps businesses understand customer engagement and identify which type of content performs better.

Why is Social Media Analytics Important?

Social media analytics helps businesses:

- Measure post-performance.
- Understand customer interests.
- Improve future content.
- Increase audience engagement.
- Make better marketing decisions.

Sample Social Media Analytics

The table below shows the performance of sample social media posts for **Soulful Sweets Bakery**.

Post	Likes	Comments	Reach	Performance
Birthday Cake Collection	420	38	3,500	Excellent
Chocolate Cake Showcase	510	52	4,000	Excellent
Weekend Family Offer	230	18	2,100	Good
Behind-the-Scenes Baking	310	25	2,700	Good
Customer Review	360	30	3,000	Very Good

Performance Analysis

From these results, I noticed that the **Chocolate Cake Showcase** received the highest number of likes and reached most people. This shows that customers enjoy attractive photos of bakery products.

The **Birthday Cake Collection** also performed well because birthday cakes are popular for celebrations and often attract more attention.

The **Weekend Family Offer** received lower engagement compared to the other posts. This could be improved by using more attractive visuals, better captions, or posting at a different time.

What Worked Well?

- Cake photos received the highest engagement.
- Customer reviews helped build trust.
- Regular posting kept followers active.
- Product-focused posts attracted more attention.

Areas for Improvement

- Write more creative captions.
- Share more short videos and reels.
- Post during peak hours.
- Add polls and questions to increase interaction.

Suggestions

To improve future social media performance, the bakery should:

- Post consistently every week.
- Use high-quality photos and videos.
- Reply to customer comments and messages.
- Use relevant hashtags.
- Continue sharing customer reviews and special offers.

Conclusion

After completing this project, I understood how social media analytics help businesses improve their content. By checking likes, comments, and reach, it becomes easier to understand what customers enjoy and what type of posts should be shared in the future. This can help businesses build better engagement and improve their online presence.

Learning Outcome

- I learned new digital marketing concepts through this project.
- I improved my practical knowledge by applying these concepts to business.
- This project helped me understand how digital marketing supports business growth.
